

# Agro Photovoltaics

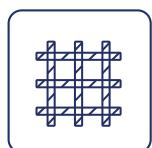

Agro photovoltaics (AgroPV) is the simultaneous use of areas of land for both solar photovoltaic power generation and agriculture.

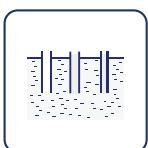

Crop protection  
+water saving  
+energy generation  
+land saving

Size fits to  
most crops

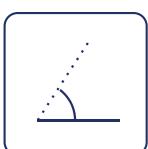

Load-bearing  
steel construction

Various pole  
foundations

Generation  
and yield  
monitoring

Adaptable  
transparency  
and angles

## Payoff in 5 years \*

**800 kW**

Power per 1ha

**1000 MWh**

Generation per 1ha/year\*\*

**250 k Eur**

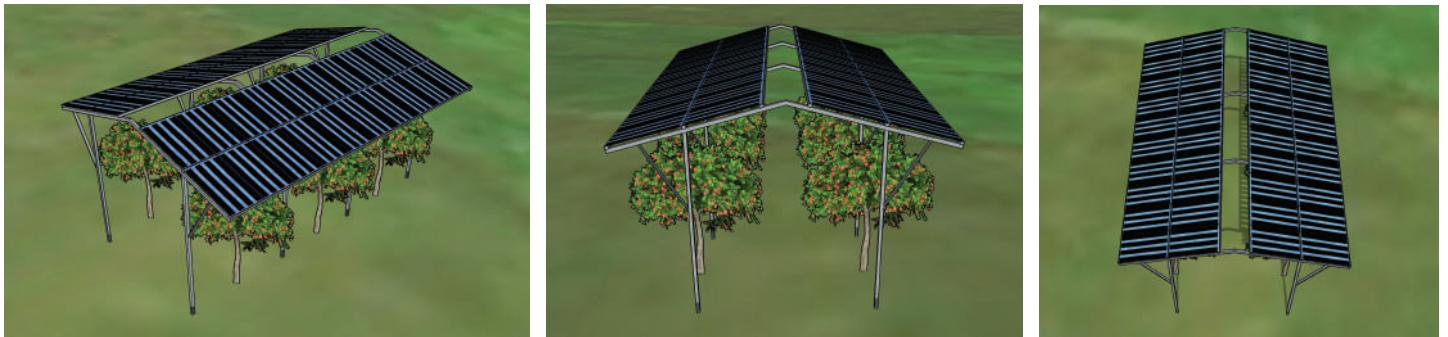

Revenue per 1ha/year\*\*\*

\* Payoff from 1 ha plot (without investment in grid connection and infrastructure). \*\* South Italy location.

\*\*\* When price - 0.25 Eur/kWh.

# AgroPV general data

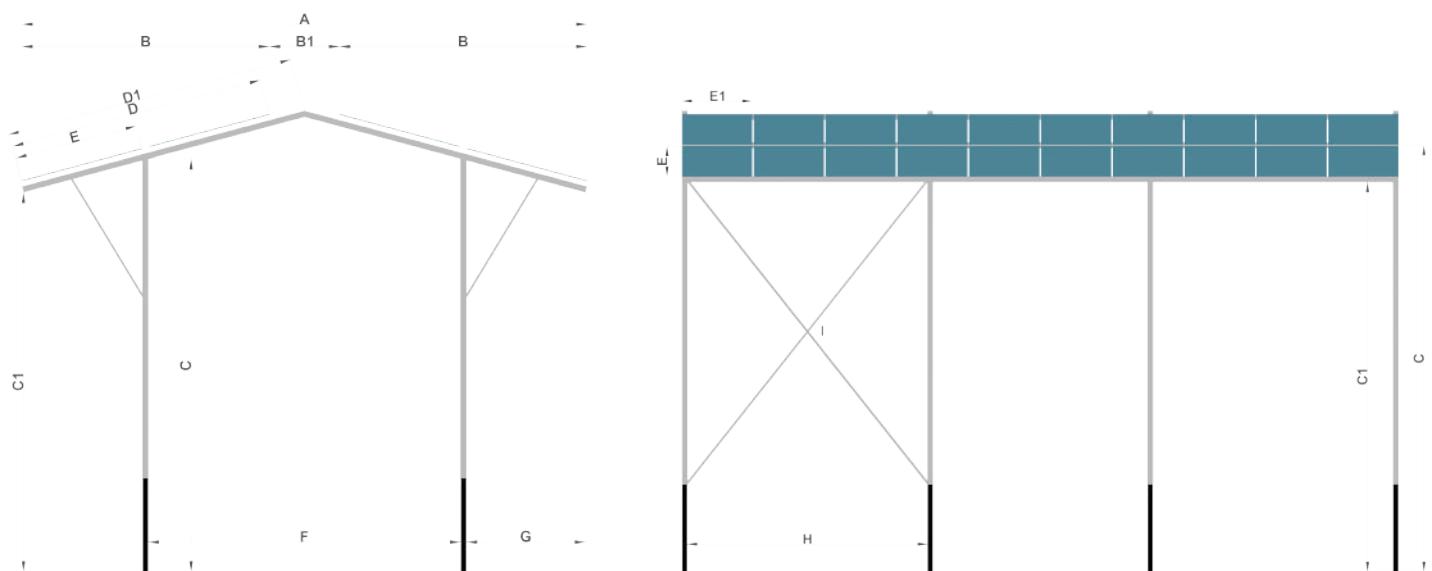

- Adaptable system light transparency: 40 – 80%
- Available system height: 2 – 5 m
- Available max width: 5 m

## AgroPV layout possibilities

Portrait layout		Landscape layout	
Single	Double	Single	Double

## Construction scheme and dimensions

A	8520 mm	C	4500 mm	D1	4410 mm	F	5000 mm	I	Every 25 m
B	3419 mm	C1	4050mm	E	1770 mm	G	1760 mm		
B1	1682 mm	D	3540 mm	E1	1050 mm	H	3000 mm		

Note: dimensions adaptable to plants measurements

# Construction parameters

Material data		Construction data	
Construction material:	Steel	Max pole step length (m):	3
Coating:	Zn coated	Available height (m):	2,1 - 5
Construction data			
V-profile ramming posts allows easy height adjustment during assembly:	<ul style="list-style-type: none"> <li>For ramming obstacles</li> <li>Ramming inaccuracies</li> <li>Adaption to the slope</li> </ul>	Tube layout:	<ul style="list-style-type: none"> <li>Main tube in each planting row</li> <li>On each main tube one east and one west module row</li> </ul>
Module inclination:	5° to 20°	Safety:	Meets applicable local norms
Connected rows:	2 rows connected	Dynamic force:	Wind tunnel test and comprehensive report

## Ground foundation

Forged foundations

Screwed foundations

Concrete foundations

## Application

(Agriculture under module rows)

Trees	Berry / shrubs	Vegetables
Apples, Pears, Plum, Peaches, Orange, Lemon, Fig, Avocado, Apricot, Cherries, Olives, Peach, etc.	Raspberries, Blueberries, Strawberries, Blackberries, Currents, Kiwi, Grapes, etc.	Tomatoes, Paprika, Chili, etc.

## Optional

- Fittings for hail net wires
- Water drainage system
- Other

## Additional information

Requirements for project implementation
Plot layout (drone footage, etc.): for exact system positioning and layout planning.
Topography survey: for evaluation of plot relief for system planning.
Geological investigation: for soil evaluation and necessary foundation planning.
Official conditions for connection to substation: to know connection requirements and availability to have required power.
Client questionnaire filled: all related project information to start project management.

## Necessary tests for pilot project

Yield forecast and AgroPV system customization

Yield change analysis before/after, under photovoltaic/in control zone:

- Test equipment
- Data collection and processing
- Evaluation and result conclusions

## Research

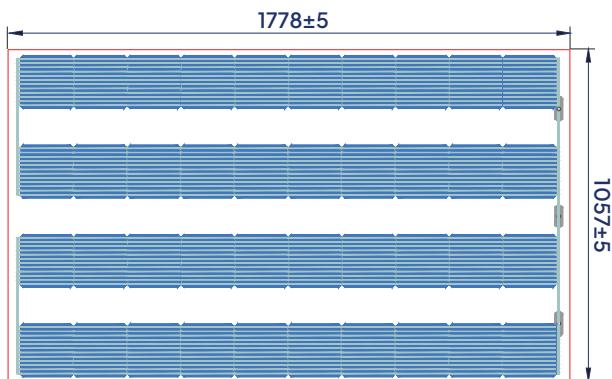

# Photovoltaics parameters\*

Module mechanical data	
Cells	40
Cell type	Bifacial
Cell configuration	4x10
Weight (kg)	30
Dimensions (mm)	1770 x 1049 x 7,1
Glass front/back	3mm/3mm
Frame	Frameless
Junction box	Split junction box / IP68
Transparency (%)	40

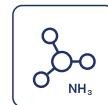

Module electrical data	
Maximum power (W)	245
Max system voltage (V)	1500
Max current (A)	15
Power tolerance (W)	0/+5W
Inverter	
Efficiency	Max 99%
Protection degree	IP66
Communication	Display, USB, MBUS, RS485, (4G)
Nominal Output Voltage	480V / 400V / 380V / 800V

\*For more technical data, please refer to Solid Agro module data sheet

## Solar module scheme

Hail resistance

Ammonia resistance

Transparency

Extreme load resistance

Fire class A

Self-cleaning effect

## Guarantee

- Construction – 10 years
- Solar modules – 30 years
- Inverter – 10 years
- Mounting system – 10 years
- Works – 5 years

## Certificates

AgroPV Construction	Modules
